

Dear Sirs,I am a truck driver who not only enjoys listening to my xm radio, but rely on the traffic reports to help me navigate around problems and ease my trip. Tuning into my xm is much easier then trying to surf channels hoping to find the info I need when I need it. With xm traffic reports I can listen to reports well before arriving in the city and plan a route to avoid problem areas. I only wish that xm had more cities with traffic reports. I am in the process of adding xm to all my vehicles, one of the reasons for doing this is the traffic reports. I fail to see how my satellite tv can provide local channels to me but my xm radio can't provide me with traffic and weather info for cities I am traveling to but can't receive with a regular radio signal yet. My final point is that if I am willing to pay for a service who but I and the service provider should decide what programing I can and can't receive. Please don't allow the NBA petition 04-160 to pass.

Thank you Shannon Hearn
